

BEFORE THE  
SHORELINES HEARINGS BOARD  
STATE OF WASHINGTON

IN THE MATTER OF A SHORELINE  
VARIANCE PERMIT GRANTED BY THE  
CITY OF SEATTLE TO BRUCE DENNIS  
AND APPROVED BY THE WASHINGTON  
STATE DEPARTMENT OF ECOLOGY  
SEATTLE SHORELINES COALITION,  
Appellant,  
v.  
STATE OF WASHINGTON  
DEPARTMENT OF ECOLOGY, CITY  
OF SEATTLE AND BRUCE DENNIS,  
Respondents.

SHB No. 79-41

FINAL FINDINGS OF FACT,  
CONCLUSIONS OF LAW  
AND ORDER

This matter, the appeal from the issuance of a shoreline variance permit to Bruce Dennis by the City of Seattle, and its approval by the Department of Ecology, came before the Shorelines Hearings Board, Nat W. Washington, Chairman, Chris Smith, James S. Williams and Robert S. Derrick, Members, in Seattle, Washington, on November 16, 1979. Nancy E. Curington, hearing examiner, presided.

1 Appellant was represented by its attorneys, Janet Quimby and Craig  
2 Gannett. Respondent Department of Ecology was represented by Jeff  
3 Goltz, Assistant Attorney General; respondent City of Seattle was  
4 represented by Ross Radley, Assistant City Attorney; respondent Bruce  
5 Dennis was represented by his attorney, John H. Strasburger.

6 Having heard or read the testimony, having examined the exhibits,  
7 having considered the parties' pre and post-hearing briefs,  
8 contentions and arguments; and the Board having served its proposed  
9 decision upon the parties herein, and having received exceptions  
10 thereto and replies to exceptions; and the Board having considered the  
11 exceptions and replies, and having granted the exceptions in part and  
12 denied said exceptions in part, the Shorelines Hearings Board now  
13 makes these

#### 14 FINDINGS OF FACT

##### 15 I

16 This matter arises from the issuance of a shoreline variance  
17 permit to Bruce Dennis (hereinafter "Dennis") by the City of Seattle  
18 (hereinafter "City") and approved by the Washington State Department  
19 of Ecology (hereinafter "DOE") for the construction of a single-family  
20 residence partially over water, with a deck and residential pier,  
21 south of Seward Park on Lake Washington, a shoreline of statewide  
22 significance in Seattle. The Seattle Shorelines Coalition  
23 (hereinafter "Coalition") appealed the shoreline variance permit  
24 issuance and approval to this Board. At the hearing DOE changed its  
25 position and admitted error in its action.

##### 26 II

27 Respondent Dennis' property is zoned residential and is designated

1 urban residential in the City's Shoreline Master Program (hereinafter  
2 "SSMP"). The water area over which a part of the proposed project  
3 would be constructed is designated conservancy management. The  
4 property is vacant with the exception of a rock bulkhead at the water;  
5 a bluff steeply slopes from Rainier Avenue (which is about  
6 twenty-three feet above the surface of the lake), to the lake.  
7 Dennis' southwest property line lies midslope. Most of the homes in  
8 the area, including Dennis' neighbors, are built partially over the  
9 water with decks and residential piers.

### 10 III

11 The proposed residence, consisting of 833 square feet over land  
12 and 810 square feet over the water, would extend 20 feet over the  
13 water. A 22 foot deck (1034 square feet) and a 17 foot pier (102  
14 square feet) would be constructed entirely over the water. All three  
15 structures would be built on pilings and would be in keeping with  
16 character of neighboring structures.

### 17 IV

18 The lot is 59 feet wide on the water with an area of 11,505 square  
19 feet. The land portion of the lot extends approximately 30 feet from  
20 the water line to the streetward property line. Presumably, a  
21 structure could be built solely on the land portion of the lot,  
22 although it would be considerably smaller than and out of character  
23 with neighboring residences.

### 24 V

25 The SSMP, identified in the record as Exhibit A-1, was adopted by

26 FINAL FINDINGS OF FACT,  
27 CONCLUSIONS OF LAW AND ORDER

1 the City and approved by DOE. Appellants, and now DOE, contend that  
2 relief via the variance procedure is improper, and that even if it  
3 were proper, the requirements for granting a variance have not been  
4 met by Dennis. Respondents City and Dennis contend that the variance  
5 was proper; even if not proper, since the proposal lies partly in an  
6 urban residential shorelines designation and partly in a conservancy  
7 management shorelines designation, the Board should consider the  
8 entire proposal to fall within the urban residential shorelines  
9 designation, and thus requiring no variance.

#### 10 VI

11 The SSMP states that the purpose of the urban-residential  
12 environment (hereinafter "U-R") is to protect areas appropriate  
13 primarily for residential uses, by maintaining the existing  
14 residential character in terms of bulk, scale, and general types of  
15 activities and developments. SSMP Section 21A.23. Under the SSMP,  
16 developments in the Conservancy Management Environment (hereinafter  
17 "C-M") are limited to those uses which are non-consumptive of the  
18 resources identified as being valuable and requiring protection. SSMP  
19 Section 21A.22. Single-family residential uses are permitted in the  
20 U-R environment; such uses are prohibited in the C-M environment.  
21 SSMP Section 21A.40. Piers are allowed in the C-M and U-R  
22 environments. SSMP Section 21A.40. New residential structures  
23 constructed over-water are prohibited. SSMP Section 21A.72. Bulk  
24 requirements of the master program limit structure heights to a  
25 maximum of 35 feet on land and allow a maximum height of 15 feet for  
26 over-water accessory structures. SSMP Section 21A.35. The height of

1 structures is determined by measuring from the average grade of the  
2 lot immediately prior to the proposed development and after any  
3 permitted landfill, to the highest point of the structure. SSMP  
4 Section 21A.33.

## 5 VII

6 Any Conclusion of Law which should be deemed a Finding of Fact is  
7 hereby adopted as such.

8 From these Findings the Shorelines Hearings Board comes to these

## 9 CONCLUSIONS OF LAW

### 10 I

11 The Board has jurisdiction over the persons and over the subject  
12 matter of this proceeding. Appellants have standing to bring this  
appeal.

### 14 II

15 In an appeal of any permit issuance, the party attacking the  
16 validity of such permit has the burden of proof. RCW 90.58.140(7).

### 17 III

18 The permit at issue herein is tested for consistency with the  
19 policy of the Shoreline Management Act "and, after adoption or  
20 approval, as appropriate, the applicable guidelines, regulations or  
21 master program." RCW 90.58.140(1).

### 22 IV

23 Criteria for DOE's approval of variance permits is apparently  
24 found in WAC 173-14-150. The regulation provides criteria only for  
25 "bulk" variances and not for "use" variances. DOE has nonetheless  
26 adopted "use" variance criteria for the Seattle master program in WAC

27 FINAL FINDINGS OF FACT,  
CONCLUSIONS OF LAW AND ORDER

1 173-19-250(21). Thus, DOE, in its review of use variances, should  
2 apply the criteria found in the approved Seattle master program.

3 V

4 A variance is required in order to allow construction of the  
5 proposal in this case, due to the location of the proposed development  
6 in the particular shorelines designations of the SSMP. Although the  
7 proposed residence would be allowed on land portion of the lot,  
8 designated U-R, the C-M designation on the water portion, prohibits  
9 such use. Moreover, the SSMP prohibits construction of residential  
10 structures over water.

11 VI

12 The SSMP states that a shoreline variance will be granted only  
13 after the applicant has demonstrated that he meets several  
14 requirements<sup>1</sup>. If any one of the requirements is not met, the  
15 shoreline variance permit cannot issue. In this instance, the  
16

17  
18 1. Section 21A.61 Shoreline Variances.

19 In specific cases the Director with approval of the  
20 Department of Ecology may authorize variances from specific  
21 requirements of this Article when there are practical  
22 difficulties or unnecessary hardships in the way of  
23 carrying out the strict letter of the shoreline master  
24 program. A shoreline variance will be granted only after  
25 the applicant can demonstrate the following:

- 26 (a) That if he complies with the provisions  
27 of the master program, he cannot make  
any reasonable use of this property.  
The fact that he might make a greater  
profit by using his property in a manner  
contrary to the intent of the program is  
not a sufficient reason for a variance.  
(b) That the hardship results from the  
application of the requirements of the  
Act and shoreline master programs, and

1 applicant showed to the satisfaction of both the City and DOE that the  
2 requirements were satisfied. It is appellant's burden of proof to  
3 show that the actions were in error.

4 In the instant case, the appellant failed to meet its burden of  
5 proof that the applicant has "any reasonable use of his property."  
6 Similarly, the appellant failed to show that the applicant's hardship  
7 did not result from the application of the requirements of the SMA and  
8 SSMP, that the variance granted would not be in harmony with the  
9 general purpose and intent of the SSMP, and that the public welfare  
10 and interest would not be preserved. Accordingly, the shoreline  
11 variance permit as issued by the City and approved by the DOE should  
12 be affirmed.

16  
17  
18  
19  
20  
21  
22  
23  
24  
25  
26  
27  
VII

14 Appellant's remaining contentions are without merit or not based  
15 upon evidence in this record. We need not address the City's  
16 contention regarding the "split lot" theory as applied to shoreline  
17 regulations.

---

18  
19 1. Cont.

20 not, for example, from deed restrictions  
21 or the applicant's own actions.

22 (c) That the variance granted will be in  
23 harmony with the general purpose and  
24 intent of the shoreline master program.

25 (d) That the public welfare and interest will  
26 be perserved.

27 In authorizing a shoreline variance, the Director may  
attach thereto such conditions regarding the location,  
character or other features of a proposed structure or  
use as may be deemed necessary to carry out the spirit and  
purpose of this Article and in the public interest.

VIII

Any Finding of Fact which should be deemed a Conclusion of Law is hereby adopted as such.

From these Conclusions, the Shorelines Hearings Board enters this ORDER

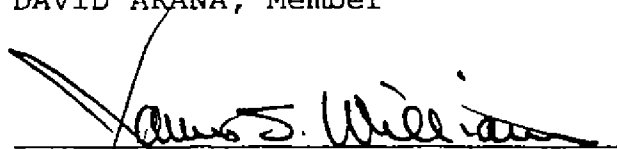

The shoreline variance permit granted to Bruce Dennis by the City of Seattle and approved by the Department of Ecology is affirmed.

DATED this 5<sup>th</sup> day of ~~May~~<sup>June</sup>, 1980.

SHORELINES HEARINGS BOARD

NAT W. WASHINGTON, Chairman

DAVID AKANA, Member

  
JAMES S. WILLIAMS, Member

  
ROBERT S. DERRICK, Member

  
WILLIAM A. JOHNSON, Member

1 WASHINGTON, CONCURRING:  
2  
3

4 I concur in the result reached by Board members Robert S. Derrick,  
5 William A. Johnson and James S. Williams, a majority of the members  
6 now constituting the Shorelines Hearings Board, and in their Order  
7 that the shoreline variance permit granted to Bruce Dennis by the City  
8 of Seattle be affirmed, but for somewhat different reasons. I also  
9 concur in the majority's Conclusion of Law that the use variance  
10 criteria found in the approved Seattle Master Program should be  
11 utilized.

12 I adopt the Findings of Fact of the majority.

13 I adopt the Conclusions of Law of the majority, but I am  
14 expressing more fully my reasons for adopting Conclusions IV and VI.

15 The pivotal issue is whether DOE's variance regulation, WAC  
16 173-14-150<sup>1</sup> as last amended in 1978 has the effect of prohibiting  
17  
18

---

19  
20 1. The portion of the WAC 173-14.50 which is particularly  
21 pertinent to the issue here reads as follows:

22 WAC 173-14-150 REVIEW CRITERIA FOR VARIANCE  
23 PERMITS. The purpose of a variance permit is  
24 strictly limited to granting relief to specific  
25 bulk, dimensional or performance standards set  
26 forth in the applicable master program where there  
27 are extraordinary or unique circumstances relating  
to the property such that the strict implementation  
of the master program would impose unnecessary  
hardships on the applicant or thwart the policies  
set forth in RCW 90.58.020.

The full text of WAC 173-14-150 is attached hereto as Appendix "A".

1 "use" variances. The majority concludes that it does not, and I agree.

2 To the extent that WAC 173-14-150 covers and provides criteria for  
3 the approval of bulk, dimensional or performance (area) variances it  
4 meets the requirements of RCW 90.58.100(5) and is a valid rule, but to  
5 the extent it may prohibit all use variances, it is in violation of  
6 the policy of the Shoreline Management Act and RCW 90.58.100(5).

7 The Department of Ecology (DOE) has the power to adopt regulations  
8 providing criteria for evaluating variances, but they must be  
9 consistent with the Shoreline Management Act and with RCW 90.58.100(5)  
10 in particular.

11 A key part of RCW 90.58.100(5)<sup>2</sup> states that each master program  
12 shall contain provisions for varying use regulations including  
13 provisions for conditional uses and variances. The statute further  
14 provides that the concept of subsection (5) shall be incorporated in  
15 rules adopted by the department.

16 The question presented here is: Can DOE comply with this  
17 directive by providing only for "area" variances and ignoring "use"

18  
19  
20  
21 2. RCW 90.58.100(5) Each master program shall contain  
22 provisions to allow for the varying of the application of use  
23 regulations of the program, including provisions for permits for  
24 conditional uses and variances, to insure that strict implementation  
25 of a program will not create unnecessary hardships or thwart the  
26 policy enumerated in RCW 90.58.020. Any such varying shall be allowed  
27 only if extraordinary circumstances are shown and the public interest  
suffers no substantial detrimental effect. The concept of this  
subsection shall be incorporated in the rules adopted by the  
department relating to the establishment of a permit system as  
provided in RCW 90.58.140(3).

1 variances. The answer depends on the meaning of the word "variance"  
2 as intended by the legislature.

3 It must be assumed that the legislature in using a zoning term  
4 without giving it a special definition or making any exceptions  
5 intended it to have its commonly understood meaning.

6 Anderson, American Law of Zoning, 2nd. Ed., a work frequently  
7 cited by the Shorelines Hearings Board and Washington appellate  
8 courts, at Sec. 18.02 (citing many cases in support) defines  
9 "variance" as follows:

10 "A variance is an authorization for the  
11 construction or maintenance of a building or  
12 structure, or for the establishment or maintenance  
13 or use of land which is prohibited by a zoning  
14 ordinance. It is a right granted by a board of  
adjustment pursuant to power in such administrative  
body by statute or ordinance and is a form of  
administrative relief from the literal import and  
strict application of zoning regulations."

15 This definition by Anderson makes it clear that "prohibited use"  
16 variances are included as an integral part of the definition of the  
17 word "variance." Anderson also makes it clear that the word  
18 "variance" includes both "use" and "area" variances. In sec. 18.46 he  
19 defines both kinds as follows:

20  
21 "A use variance authorizes a use of land which  
22 otherwise is proscribed by zoning regulations. An  
23 area variance authorizes deviation from  
24 restrictions upon the construction and placement of  
buildings and structures which are employed to  
house or otherwise serve permitted uses."

25 By using the word "variance" alone in RCW 90.58.100(5) and without  
26 any special definition or exceptions, it appears that the legislature

1 did not intend variance permits to be limited to area variances. This  
2 interpretation is strongly supported by the inclusion in subsection  
3 100(5) of the phrase "unnecessary hardship." This phrase is primarily  
4 associated in the law with use variances.<sup>3</sup>

5 The conclusion that is reached because of the legislature's of the  
6 word "variance" without making any exceptions, is fortified by the  
7 fact that the legislature also directed in 90.58.100(5) that relief be  
8 granted from unnecessary hardships caused by the application of "use  
9 regulations" without making any exception as to the type of "use  
10 regulation" intended.

11 RCW 90.58.100(5) states, "Each master program shall contain  
12 provisions to allow for the varying of the application of use  
13 regulations of the program . . ." (emphasis supplied) This provision  
14 contains no exceptions, so it must have been intended to apply to all  
15 use regulations adopted by an agency. A master program provision  
16 which sets forth a use but prohibits it is unquestionably a "use  
17 regulation." It follows therefore that agencies must provide a  
18 variance procedure to insure that the strict implementation of  
19 prohibited use regulations will not create unnecessary hardships.  
20 That DOE is required to incorporate the concept 90.58.100(5) into its  
21 own rules, leads to the conclusion that DOE's own rules must also

---

22  
23  
24  
25 3. Anderson, American Law of Zoning, 2d. Ed. Sec. 18.08, 18.09,  
26 18.10.

1 contain provisions for varying all use regulations including  
2 prohibited use regulations.

3 It must be remembered that the Shoreline Management Act  
4 established a new and untried long range program. It appears to have  
5 been the intention of the legislature to prevent use regulations of  
6 any agency from being so rigidly set that the only relief available  
7 would be through the long and uncertain process of amending the master  
8 program. To insure against unyielding rigidity, a safety valve in the  
9 form of conditional use permits and variances was provided.

10 RCW 90.58.100(5) provides that variances are one of the devices to  
11 be used to insure that strict implementation of a master program will  
12 not create unnecessary hardship or thwart the policy set forth in RCW  
13 90.58.020. Since some of the most severe hardships can come from the  
14 strict implementation of prohibited use regulations, it seems clear  
15 that the intent of RCW 90.58.100(5) would be thwarted by a blanket  
16 elimination of use variances.

17 If possible WAC 173-14-150 should be construed in such a way as to  
18 harmonize it with the Shoreline Management Act, and not be held to be  
19 invalid because it fails to provide criteria for reviewing use  
20 variances. The method for harmonizing has already been charted by the  
21 majority decision in City of Seattle v. Department of Ecology, SHB No.  
22 78-21 (1978) at page 3. There it was held that DOE in promulgating  
23 WAC 173-14-150 had excluded use variances from the operation of the  
24 regulation. In harmonizing the regulation with the Shoreline  
25 Management Act, the majority held that DOE "does not exceed its  
26 statutory authority by not going far enough." In other words DOE did  
27

1 not exceed its authority by failing to provide criteria for evaluating  
2 use variances in WAC 173-14-150.<sup>4</sup> It was on the basis of this  
3 holding that the majority decision upheld the validity of the  
4 regulation. The net effect of this decision was to limit the  
5 application of newly amended WAC 173-14-150 to "area" variances only.

6 WAC 173-14-150 can be reconciled with RCW 90.58.100(5) and the  
7 policy of the shoreline act, and can continue in force as a valid  
8 regulation, but only for the limited purpose of evaluating area  
9 variances. The limiting language in WAC 173-14-150 states:

10 "The purpose of a variance permit is strictly  
11 limited to granting relief to specific bulk,  
12 dimensional or performance standards . . ." (area  
standards) (parenthesis supplied)

13 This provision is in the nature of a definition which merely limits  
14 the application of variances for the purpose of WAC 173-14-150 to  
15 "area" variances only, and does not amount to a blanket prohibition of  
16 "use" variances. Thus DOE was left free to later adopt a separate and  
17 distinct regulation relating only to "use" variances.

18  
19  
20 4. The holding on which the Seattle decision was based reads as  
21 follows:

22 "The DOE's failure to provide for the varying of a  
23 prohibited use, even if it were required to provide  
24 for such under RCW 90.58.100(5), is not a ground to  
25 invalidate the rules which are promulgated. DOE  
26 does not "exceed" its statutory authority by not  
going far enough."

1 Unless WAC 173-14-150 can be reconciled in this manner, it must be  
2 held to be invalid as an attempt to completely prohibit use  
3 variances. Such a prohibition exceeds DOE's statutory authority,  
4 because RCW 90.58.100(5) by its terms requires provision for "use"  
5 variances as well as for "area" variances..

6 DOE does not have the power to prohibit that which the statute  
7 requires, and to do so would be to exceed its statutory authority.  
8 Exceeding statutory authority is one of the grounds provided in RCW  
9 34.04.070(2) for invalidating a rule or regulation adopted by a state  
10 agency.

11 In promulgating a new regulation relating only to "use" variances  
12 DOE could logically continue to utilize the strict "any reasonable  
13 use" test found in WAC 173-16-070, and in many master programs  
14 including Seattle's, rather than the less strict "a reasonable use"  
15 provision found in the 1978 amendment to WAC 173-14-150. This is in  
16 keeping with accepted variance practice. Anderson points out that in  
17 most states "area" variances are approved on less strict standards  
18 than those required to sustain a "use" variance. Anderson, American  
19 Law of Zoning, 2d. Ed. Sec. 18.46, page 266.

20 Appellant has presented a different view of the holding of the  
21 majority decision in Seattle, supra, and appears to contend that the  
22 majority held that the new rule, WAC 173-14-150, had the effect of  
23 actually forbidding variances of prohibited uses. It is my conclusion  
24 that appellant is in error. The holding upon which the decision  
25 turned is stated by the majority in two short sentences:

26 "The DOE's failure to provide for the varying of a  
27 prohibited use, even if it were required to provide

1 for such under RCW 90.58.100(5), is not a ground to  
2 invalidate the rules which are promulgated. DOE  
3 does not "exceed" its statutory authority by not  
4 going far enough."

5 DOE did not forbid or outlaw variances of prohibited uses. It merely  
6 failed to provide for them.

7 Appellant contends that the majority in Seattle held that to allow  
8 a variance from a prohibited use would violate the policy of the  
9 Shoreline Management Act. Appellant appears to have to relied upon a  
10 sentence (underlined below) which was not a part of the majority's  
11 holding, but was contained in the advisory part of the decision which  
12 is largely applicable to the local governments effected by the rule  
13 and the decision. The advisory portion starts near the top of page 4  
14 with the admonition: "Prohibition of a use requires careful  
15 consideration." Then follow two informative sentences, the second  
16 being the one which is emphasized by appellant:

17 "a use which is not reasonable and appropriate  
18 use" of shorelines (RCW 90.58.020) can be  
19 prohibited by a master program in favor of a use  
20 which is reasonable and appropriate. (emphasis  
21 supplied) If a prohibited use can be permitted  
22 through the vehicle of a variance, it would be done  
23 in violation of the policy of the Shoreline  
24 Management Act (SMA). (underline supplied)

25 In the completely underlined sentence which is being emphasized by  
26 appellant, the key words are the term "prohibited use." In the  
27 context in which it appears, the term "prohibited use" is obviously  
used as a short synonym for the long phrase "a use which is not

1 reasonable or appropriate,"<sup>5</sup> which is found in the sentence  
2 preceding it. Read in context, the reader understands the sentence to  
3 mean: "If 'a use which is not reasonable or appropriate' can be  
4 permitted through the vehicle of a variance, it would be done in  
5 violation of the policy of the Shoreline Management Act (SMA)." This  
6 sentence appears to have been used merely to illustrate that the wrong  
7 use of a variance violates the policy of the SMA.

8 The next two sentences continue the "reasonable appropriate use"  
9 discussion, but show the other side of the coin. These two sentences  
10 point out the danger that prohibited use regulations may be used to  
11 prohibit uses which may be reasonable and appropriate under certain  
12 circumstances, and further point out that failing to foster "all  
13 reasonable and appropriate" use would thwart the policy of RCW  
14 90.58.020.

15 I conclude that the sentence appellant contends is a holding that  
16 a variance from a prohibited use would violate the policy of the SMA,  
17 is not a holding, but instead is merely an advisory sentence.

18 I conclude that DOE has the statutory authority to promulgate a  
19 new rule establishing criteria for evaluating variances of prohibited  
20  
21  
22

23 5. In the context of RCW 90.58.020 a "prohibited use" may be  
24 defined as a use which is not reasonable or appropriate in a specified  
25 zone or environment.  
26

1 use regulations.<sup>6</sup> However, until this is done the only use variance  
2 standards will be found in those local master programs whose use  
3 variance criteria is consistent with the variance requirements which  
4 are set forth in WAC 173-16-070. In those instances where a master  
5 program is found by DOE not to be consistent in certain specified  
6 respects, I conclude that the provisions of WAC 173-16-070 may be  
7 applied, but only to the extent necessary to supply the specified  
8 deficiencies.

9 WAC 173-16-070 appears to have been enacted in 1972 by DOE to  
10 fulfill the requirements of RCW 90.58.100(5), 90.58.140(3) as to rules  
11 and to fulfill the requirements of 90.58.60 as to guidelines. It thus  
12 has performed the dual function of being both a guideline and a rule.  
13 It is arguable that as a guideline its function may well have ceased  
14 as to each local government upon the approval by DOE of its master  
15 program, (RCW 90.58.030(3)(a) and 90.58.140(2)(b)), except possibly to  
16 be utilized later to evaluate master program amendments. As a rule,  
17 unlike a guideline, the life span of WAC 173-16-070 is not tied in any  
18 way to master program adoption. Thus I conclude that WAC 173-16-070  
19 could at least be utilized to provide use variance evaluation criteria  
20 where the use variance criteria of a local government is not  
21 consistent with it. A review of the variance regulations in the  
22 master programs of a number of cities and counties indicates that

25 6. RCW 90.58.100(5), RCW 90.58.140(3) and RCW 90.58.200  
26

1 many are inconsistent in some respects with WAC 173-16-070. In  
2 particular many do not have the strong provision regarding "any  
3 reasonable use" found in WAC 173-16-070.

4 I agree with the conclusion and reasoning in Conclusion of Law  
5 VI. In addition, however, I believe the variance permit in this case  
6 can be held to be in compliance with applicable use variance criteria  
7 on the basis of the precedents established in Lavalley v. Department  
8 of Ecology, PCHB No. 78-7 (1978) and Miller v. Department of Ecology,  
9 PCHB No. 78-9 (1978). The prohibited use variance granted in this  
10 case complies with the variance criteria of the SSMP in all respects,  
11 as did the variances in Lavalley and Miller. This variance complies  
12 with the use variance criteria of WAC 173-16-070 to virtually the same  
13 degree that Lavalley and Miller complied with practically the same  
14 criteria contained in WAC 173-14-150 before the 1978 amendment.

15 The strict "any reasonable use" standard was applied here and in  
16 the Lavalley and Miller cases to an extraordinary set of physical  
17 factors which, in all probability, will be found in but few other  
18 cases. In each of these cases it has been applied to a small tract in  
19 a situation where there was a single vacant waterfront lot with houses  
20 and decks built over water on both immediately adjacent lots. In each  
21 case the waterward projecting homes on both sides substantially  
22 restricted the view from the land portion of the single lot between.  
23 In each case the applicant for variance has not been allowed to  
24 project his structures beyond those of his immediate neighbors on both  
25 sides. In each case the proposed development has been in harmony with  
26 the existing neighborhood, and has been in harmony with the general  
27

1 purpose and intent of the master program. In each case the narrow  
2 vacant waterfront lot between two existing waterward projecting homes  
3 was contributing no appreciable shoreline benefits to the public. An  
4 application for a variance to build over water where there are two or  
5 more vacant lots between waterward projecting homes would present a  
6 different factual situation then presented here and in Lavalley and  
7 Miller as far as the "any reasonable use" requirement is concerned.

8 The standards for securing a variance of a prohibited use should  
9 be strict and the justifying conditions should be extraordinary. It  
10 should be extremely difficult to secure a prohibited use variance,<sup>7</sup>  
11 but it should not be impossible.

1 AKANA, concurring:

2 I concur in the findings and result of the majority.  
3 There is some question as to the precise criteria which should be  
4 applied in this case. The Department of Ecology has spawned a  
5 number of regulations concerning variances which are relevant to  
6 our inquiry: WAC 173-14-150 (permit program); WAC 173-16-070  
7 (guidelines); WAC 173-19-250(21) (master program). The 1978  
8 amendment to WAC 173-14-150, which creates a difference from the  
9 other rules by the absence of use variance criteria, has brought  
10 uncertainty as to what rule should apply here. The Shorelines  
11 Management Act makes the approved master program the operative  
12 regulatory document and the use variance criteria found in that  
13 document should be used. RCW 90.58.100; RCW 90.58.140.

## APPENDIX "A"

**WAC 173-14-150** *Review criteria for variance permits.* The purpose of a variance permit is strictly limited to granting relief to specific bulk, dimensional or performance standards set forth in the applicable master program where there are extraordinary or unique circumstances relating to the property such that the strict implementation of the master program would impose unnecessary hardships on the applicant or thwart the policies set forth in RCW 90 58 020.

(1) Variance permits should be granted in a circumstance where denial of the permit would result in a thwarting of the policy enumerated in RCW 90 58 020. In all instances extraordinary circumstances should be shown and the public interest shall suffer no substantial detrimental effect.

(2) Variance permits for development that will be located landward of the ordinary high water mark (OHWM), as defined in RCW 90 58 030(2)(b), except within those areas designated by the department as marshes, bogs, or swamps pursuant to chapter 173-22 WAC, may be authorized provided the applicant can demonstrate all of the following:

(a) That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes or significantly interferes with a reasonable permitted use of the property.

(b) That the hardship described in WAC 173-14-150(2)(a) above is specifically related to the property, and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of the master program, and not, for example, from deed restrictions or the applicant's own actions.

(c) That the design of the project will be compatible with other permitted activities in the area and will not cause adverse effects to adjacent properties or the shoreline environment designation.

(d) That the variance authorized does not constitute a grant of special privilege not enjoyed by the other properties in the area, and will be the minimum necessary to afford relief.

(e) That the public interest will suffer no substantial detrimental effect.

(3) Variance permits for development that will be located either waterward of the ordinary high water mark (OHWM), as defined in RCW 90 58 030(2)(b), or within marshes, bogs, or swamps as designated by the department pursuant to chapter 173-22 WAC, may be authorized provided the applicant can demonstrate all of the following:

(a) That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes a reasonable permitted use of the property.

(b) That the hardship described in WAC 173-14-150(3)(a) above is specifically related to the property,

and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of the master program, and not, for example, from deed restrictions or the applicant's own actions.

(c) That the design of the project will be compatible with other permitted activities in the area and will not cause adverse effects to adjacent properties or the shoreline environment designation.

(d) That the requested variance will not constitute a grant of special privilege not enjoyed by the other properties in the area, and will be the minimum necessary to afford relief.

(e) That the public rights of navigation and use of the shorelines will not be adversely affected by the granting of the variance.

(f) That the public interest will suffer no substantial detrimental effect.

(4) In the granting of all variance permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if variances were granted to other developments in the area where similar circumstances exist the total of the variances should also remain consistent with the policies of RCW 90 58 020 and should not produce substantial adverse effects to the shoreline environment. [Statutory Authority RCW 90 58 200 78-07-011 (Order DE 78 7), § 173-14-150, filed 6/14/78, Order DE 76-17, 173-14-150, filed 7/27/76, Order DE 75-22, § 173 14-150, filed 10/16/75.]
